

Usability Testing

UX Expert: Why are you waving the keyboard around over your head?

Participant: To keep the elephants away!

UX Expert: Does it work?

Participant: You don't see any elephants do you?

Usability testing

“Watching people try to use what you’re creating / designing / building (or something you’ve already created / designed / built), with the intention of (a) making it easier for people to use or (b) proving that it is easy to use.”

—Steve Krug

Quantitative VS Qualitative

- ❖ Quantitative:
- ❖ Proving Something
 - Is this latest version better than the previous one?
 - Is our site as easy to use as our competitors?
- ❖ Measuring success rate of tasks, time it takes to complete, etc.
- ❖ Rigorous, like a science experiment, or results won't be trustworthy

DIY usability testing

- ❖ Qualitative:
- ❖ Purpose not to *prove* anything **BUT** to get insights that enable you to *improve* what you are building (informal and unscientific)
- ❖ fewer user tests required

How to DIY usability test

- ❖ Tester sits in room with participant, asks them to do some **tasks** and **think out loud** while they do it.
- ❖ Results **observed** by the team working on the project. **Recorded** with screen recording software.
- ❖ When finished, observers have a **debrief**, compare notes and decide what should be **fixed**.
- ❖ Easy!
