

FTP to Phoenix

To connect to Phoenix server and upload your files, first start Fetch, available on College computers and for free for Sheridan Students from the Fetch website.

Go to File>New Connection and fill in the details as below, but with your IXD number:

The password is not your Wordpress password, but the password you submitted to cpanel on the first day of class. If you cannot remember this then contact mark.galaszkiewicz@sheridancollege.ca to have your password reset. If you did not change your password then try 'generic'.

Hit the connect button and a remote view of your server will appear. Double click the 'public_html' folder. Then drag your website folder into the window to upload all your files to Fetch. The URL to link to on your blog will be:

http://phoenix.sheridanc.on.ca/~ixd2070/your_folder/

Obviously change the number and folder name to your own.
